These products comply with the following standards

EN470-1 Protective Clothing for use in Welding & Allied Processes.

This part of the European Standard specifies test methods and general performance requirements for protective clothing for operators engaged in welding and allied processes with comparable risks.

EN531 Protective Clothing for Industrial Workers Exposed to Heat (excluding fire-fighters and welders clothing).

Protective clothing complying with this standard is intended to protect industrial workers against brief contact with flame and heat in the form of convective heat, radiant heat, large molten metal splashes or a combination of these hazards.

Products individually tailored to your requirements

The products shown overleaf are an overview of what we can offer – CAC can manufacture any item with bespoke modifications to provide you with the product that best meets your requirements. In many cases, although a bespoke product may have a higher unit cost compared to imported off-the-shelf products, enhanced durability and/or usability can often provide you with significantly reduced overall costs.

As manufacturers of the products we sell we also have a full understanding of all current EN standards, so in an age of ever more stringent health and safety legislation we can also offer you the invaluable peace of mind that our products measure up to the tasks they're designed for. We are happy to provide clarification on which EN standards are relevant to any particular task.

High performance heat protection

As leaders for more than thirty years in high performance protection against extreme temperatures, and in a new era of legislative requirements, CAC remains at the forefront of developing alternative materials to offer the very highest levels of heat protection.

Let us help with your problems

Remember at CAC, you're talking to the manufacturers – we know our products inside out and can give you honest advice on the capabilities of any item, but more importantly, it means we can adapt to your needs. Whether you need a solution that looks beyond unit prices to provide the best overall cost benefit, a product that offers better performance, or simply a more efficient supply chain, please give us a call.
