## These products comply with the following standard

### EN381 Protective Clothing for users of Handheld Chainsaws – Part 7: Requirements for Chainsaw Protective Gloves.

*This European Standard specifies the requirements for gloves for resistance to cutting by a chainsaw when assessed by the test method described in BSEN381-4: 1999. The requirements are also given for marking and for the provision of information to be supplied by the manufacturer including criteria for the selection of appropriate gloves, and instructions for use.*

## Products individually tailored to your requirements

The products shown overleaf are an overview of what we can offer – CAC can manufacture any item with bespoke modifications to provide you with the product that best meets your requirements. In many cases, although a bespoke product may have a higher unit cost compared to imported off-the-shelf products, enhanced durability and/or usability can often provide you with significantly reduced overall costs.

As manufacturers of the products we sell we also have a full understanding of all current EN standards, so in an age of ever more stringent health and safety legislation we can also offer you the invaluable peace of mind that our products measure up to the tasks they're designed for.

We are happy to provide clarification on which EN standards are relevant to any particular task.

## Let us help with your problems

Remember at CAC, you're talking to the manufacturers – we know our products inside out and can give you honest advice on the capabilities of any item, but more importantly, it means we can adapt to your needs. Whether you need a solution that looks beyond unit prices to provide the best overall cost benefit, a product that offers better performance, or simply a more efficient supply chain, please give us a call.
